

ELÍAS GARCÍA

📍 Portugal (remote)

I'm a full-stack software engineer with nine years of experience, most recently in Web3 and DeFi, building everything from real-time data pipelines and APIs to user-facing apps. I've led teams of up to ten engineers, built products from zero to production, and brought AI into how those teams build.

WORK EXPERIENCE

2024 - Present | Engineering Lead @ Vesu

DeFi lending protocol on Starknet. Led engineering from launch to $84.6M peak TVL.

- **Frontend:** built the lender and borrower UI, the Curator UI for risk parameters and an on-chain-only fallback UI so users can always exit positions, on top of a shared Ark UI design system I introduced across all three apps.
- **Backend and data:** built the real-time indexer on Apibara DNA powering the product and a public API, an RFQ system for liquidations over WebSockets, and an MCP server that lets stakeholders query protocol data without going through engineering.
- **Cross-functional lead:** technical bridge between product, protocol and frontend teams. Evaluated product decisions, scoped their implementation, and designed contract integrations with the protocol engineers.
- **Engineering process:** set up issue tracking, CI/CD and release pipelines from zero, reviewed and mentored the frontend team, and introduced the company's AI development practice.

2020 - 2024 | Staff Frontend Engineer → Tech Lead @ Polygon Labs

- **Hermez:** payments rollup, acquired by Polygon in 2021. Built the wallet and block explorer in React, Redux and TypeScript, and contributed to the protocol SDK.
- **Polygon zkEVM:** led a 3-person frontend team across all zkEVM user-facing products, including the LxLy Bridge, the canonical route from Ethereum, as the chain grew to $180M peak TVL.
- **Polygon ID:** Tech Lead of a 10-engineer team, backend and frontend, behind the Issuer Node, Web Wallet, Credential Marketplace and Schema/Query Builder, the full stack for issuing and verifying ZK credentials. Worked across the protocol, product and DevRel teams to ship releases and drive integrator adoption.

2019 - 2020 | Senior Frontend Engineer @ Nexiona

- **MIIMETIQ:** no-code IoT platform for Industry 4.0, used across Europe by companies including Celsa Group and Grifols. Built its frontend in React and Redux.

2018 - 2019 | Lead Frontend Engineer @ Netex Learning

- **Netex Cloud:** e-learning SaaS for authoring and managing digital content, used by thousands of learners at companies including Amazon and Inditex. Led its 4-person frontend team in Angular and NgRx, delivered the platform's internationalisation and accessibility, and mentored them on frontend architecture.
- **Design system:** led a cross-department initiative to build a shared component library adopted across the company's products.

2017 - 2018 | Full-Stack Engineer @ Ágora Binaria

Full-stack client applications in Angular, Node.js and MongoDB, plus performance work on existing Angular codebases.

EDUCATION

2013 - 2017 | Computer Science @ University of A Coruña

BSc, specialization in Software Engineering.

SKILLS

- **Core:** JavaScript, TypeScript and Zod, used across frontend and backend.
- **Frontend:** React, Next.js, Astro, Angular, state management (NgRx, Redux, Zustand), data fetching (TanStack Query, SWR).
- **Design systems & UI:** styling (CSS, CSS Modules, CSS-in-JS, Tailwind CSS), component libraries (Shadcn, Ark UI, Material UI, Ant Design), accessibility (WAI-ARIA).
- **Backend:** Node.js, Nest.js, Express, REST API design, WebSockets, BullMQ.
- **Databases:** PostgreSQL, MongoDB, Redis.
- **Testing:** Vitest, Jest, Cypress.
- **Data:** real-time indexing (Apibara, Ponder).
- **Infra:** AWS, Docker, Terraform, GitHub Actions, Jenkins.
- **Observability:** Datadog, Sentry, BetterStack.
- **AI:** Claude Code, MCP servers, agent workflows.
- **Web3:** Ethereum, Ethers.js, Viem, Wagmi, Starknet.js, Solidity and Cairo.
- **DeFi:** lending markets, vaults, oracles, RFQ.
- **Languages:** Spanish (native), English (professional working proficiency).

TALKS

- **2024 | House of ZK @ EthDenver:** Preserving privacy with Polygon ID profiles.
- **2024 | Polygon AggCave @ EthDenver:** Getting started with Polygon ID.
- **2023 | Polygon Guild Lisbon:** Polygon ID and Self-Sovereign Identity.
